(Independent verifier approved by EPD Norway)

General information

Product

Product description:

Precast concrete columns are used in building constructions. The columns are manufactured with/without column shoes on base and screw type fastenings on top and with/without steel brackets.

Product specification:

Product specification is given below.

Materials	kg	%
Sand	332,4	33,2 %
Stone	416,8	41,7 %
Cement	125,9	12,6 %
Reinforcement details	72	7,2 %
Steel details	18,3	1,8 %
Water	34,2	3,4 %
Additives	0,4	0,0 %
	1000	100,0 %

Technical data:

Products are available in various sizes are manufactured in length up to 24000 mm.

Columns are produced in accordance with EN 13225:2013.

Market:

Norway

Reference service life, product:

60 years

Reference service life, building:

60 years

LCA: Calculation rules

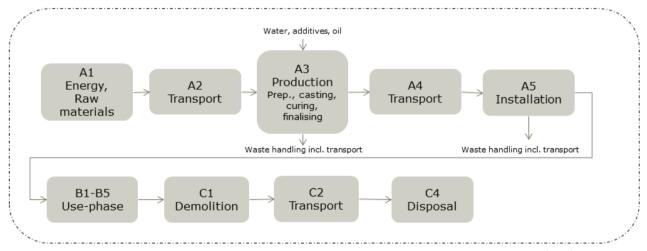

Declared unit:

1 tonne precast concrete column

System boundary:

The system boundaries for the cradle-to-grave analysis are given in the flow diagram. All modules are included except module D. There are no environmental impact in B1-B5 and B6 and B7 are not relevant according to PCR. Waste processing is included in module A1-3 and in C1 and C4.

Figure 1 Flow diagram

Systemboarder

Data quality:

Product specific data is based on the annual average of 2014. Generic data is from Simapro v.8.0.5.13 with Ecoinvent v 3.2 database from 2014.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production inhouse is allocated equally among all products through mass allocation. Effects of primary production of recycled materials allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Cut-off criteria:

All major raw materials and all the essential energy is included. The production process for raw materials and energy flows that are included with very small amounts (<1%) are not included. This cut-off rule does not apply for hazardous materials and substances.

Variability:

The size of the product differs from project to project, but the results are given per tonne product and based on the production volume, this is assumed to be a representative estimate of the environmental burden of the products

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

The transport distance from the production site to consumer is an average distance based on factory location and typical customer location for this product.

Transport from production place to user (A4)

Туре	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy	Value
	Capacity utilisation (incl. return) 70			consumption	(I/t)
Truck	58 %	Freight lorry >32t, Euro 4	312	0,014 l/tkm	4,37
Boat	71 %	Transoceanic ship	2002,5	0,003 l/tkm	6,00

A5 includes energy use in building machines. It also includes transportation to- and incineration of wood used for material protection during transportation.

Assembly (A5)

	Unit	Value
Auxiliary	kg	
Water consumption	m^3	
Electricity consumption	kWh	
Other energy carriers	MJ	42
Material loss	kg	
Output materials from waste treatment	kg	
Dust in the air	kg	

The product is demolished and separated at site. Steel is recycled. Concrete is either deposited (25,9 %) or used in roadfillings etc. (74,1 %).

End of Life (C1, C3, C4)

	Unit	Value
Hazardous waste disposed	kg	
Collected as mixed construction waste	kg	
Reuse	kg	
Recycling	kg	764,2
Energy recovery	kg	
To landfill	kg	235,8

The transportation in C2 is from the site to recycling or landfill. It is assumed that waste processing happens at site.

Transport to recycling and disposal (C2)

Туре	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy		Value
Truck	37	Freight lorry, 16-32t, Euro 4	15	0,031	l/tkm	0,47

LCA: Results

The cradle to grave results for 1 tonne product.

INA is used for indicators we assume is zero or close to zero. The indicators are zero in the foreground system, but as there could be small contributions in the background system the indicators are set as INA instead of zero.

Reading example: $9.0 \text{ E}-03 = 9.0 \cdot 10^{-3} = 0.009$

Additional Norwegian requirements

Greenhous gas emission from the use of electricity in the manufacturing phase

Markuciai holds a green cerificate for power supplied by Green Lithuanian Energy, Energijos Tiekimas. This certificate certifies that Markuciai consumes electricity from 100 % renewable energy sources. Energijos Tiekimas purchases electricity from Kaunas Hydroelectric Power Plant and the electricity used in the manufacturing phase is 100 % run-of-river production.

Data source	Amount	Unit
Econinvent v3 (june 2014)	10,2	g CO ₂ -eqv/kWh

Dangerous substances

V	The product contains no substances given by the REACH Candidate list or the Norwegian priority list
	The product contains substances given by the REACH Candidate list or the Norwegian priority list that are less than 0,1 % by weight.
	The product contain dangerous substances, more then 0,1% by weight, given by the REACH Candidate List or the Norwegian Priority list, see table.
	The product contains no substances given by the REACH Candidate list or the Norwegian priority list. The product is classified as hazardous waste (Avfallsforskiften, Annex III), see table.

Indoor environment

The product has not been tested for emissions to indoor environment.

Carbon footprint

Carbon footprint has not been worked out for the product.
